TRACHEAL TUBES USE:

1. Before using tracheal tubes with the connector pushed on halfway, it must be ensured that the connector is pushed into the tube shaft as far as it will go.
2. To improve the tight hold, it is advisable to clean with ethanol, both the contact surface of a connector that has been loosened once or removed and the corresponding tube shaft, before reinserting it.
3. This particularly applies to those cases in which the connector was completely removed first (e.g. for fibre optic insertions), or

was pushed on again after the tube had been shortened.
